- Managing campus events manually can lead to confusion, missed registrations, and poor coordination.
- In colleges, organizing workshops, seminars, and events efficiently is very important.
- This project aims to provide a simple and efficient Smart Campus Event Management System.
- It allows students to view upcoming events, register, and provide feedback easily.
- Admins can create, update, and delete events through a centralized system.
- The application is built using Spring Boot, Thymeleaf, and MySQL.
- This project demonstrates real-world web application development and CRUD operations.

PROBLEM STATEMENT

1
2
3
4
5
6
7
8
9

- Manual management of campus events often leads to errors and miscommunication.
- Students may miss important event updates due to lack of a centralized system.
- Registration processes are not organized and can lead to data loss.
- Event details are not easily accessible to all students.
- Managing multiple events manually becomes time-consuming for administrators.
- Lack of proper feedback collection affects event improvement.
- No efficient system to update or delete event information dynamically.
- Overall, the absence of a digital system reduces efficiency and coordination.

OBJECTIVE(S)

The picture can't be displayed.

1
2

- To develop a Smart Campus Event Management System for efficient event handling.
- To allow students to view all upcoming events in a centralized platform.
- To enable students to register for events easily through an online system.
- To provide a feedback mechanism for improving event quality.
- To allow admins to create, update, and delete event details.
- To maintain all event and registration data in a structured database.
- To improve communication between students and event organizers.
- To reduce manual work and increase system efficiency.

PROPOSED SYSTEM

1
2
3
4
5
6
7
8
9

- The proposed system is a Web-Based Smart Campus Event Management System developed using Spring Boot, Thymeleaf, and MySQL.
- It allows students to view all upcoming events and access event details in a centralized platform.
- Students can easily register for events and provide feedback through online forms.
- Admins can create, update, and delete event information dynamically using the system.
- All event, registration, and feedback data are securely stored in a MySQL database.
- The system provides a user-friendly interface for both students and administrators.
- Compared to manual systems, it is more reliable, organized, and scalable.

PROPOSED SYSTEM ARCHITECTURE

Input

- User logs into the system using credentials.
- User selects actions like viewing events, registering, or giving feedback.

Processing

- System validates user input and processes the request.
- Controllers and services handle business logic.

Data Storage

- Event, registration, and feedback data are stored in MySQL database.
- CRUD operations are performed using JPA/Hibernate.

Data Storage

- Event, registration, and feedback data are stored in MySQL database.
- CRUD operations are performed using JPA/Hibernate.

Output

- Updated event details are displayed to the user.
- Registration and feedback confirmation messages are shown.

Frontend:

- HTML5
- CSS3
- Thymeleaf

Backend:

- Spring Boot
- Spring MVC
- **Database:**
- MySQL Workbench

Server:

- Tomcat Server

Tools:

- VS Code
- MySQL Workbench
- Web Browser (Chrome)
- Postman (API Testing)

Hardware / Software Requirements:

- **System:** Windows 10
- **RAM:** Minimum 4GB

Software:

- Java JDK (17 or above)
- Apache Tomcat Server
- MySQL Server

MODULE DESCRIPTION

- **Module 1: User Authentication**

  Handles login for admin using basic authentication.

  Restricts unauthorized access to admin features.

- **Module 2: Event Management**

  Add new events with name, department, type, and date.

  Update and delete events using CRUD operations.

- **Module 3: Student Interaction**

  Allows students to browse upcoming events.

  View event details using MVC pages and REST APIs.

- **Module 4: Event Registration**

  Students can register for events with form validation.

  Module 5: Search & Filters

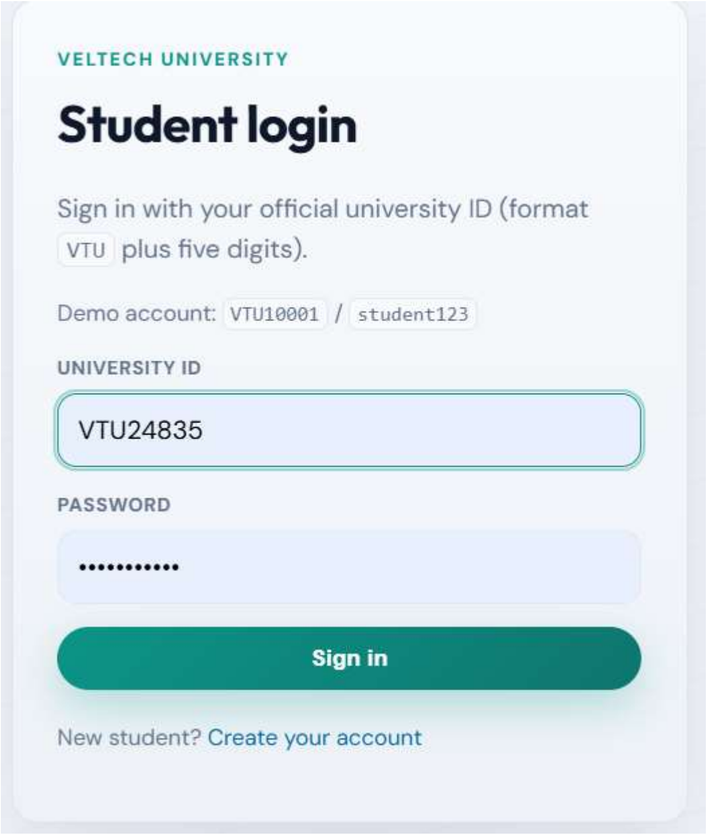
  Search events based on date, department, and type.

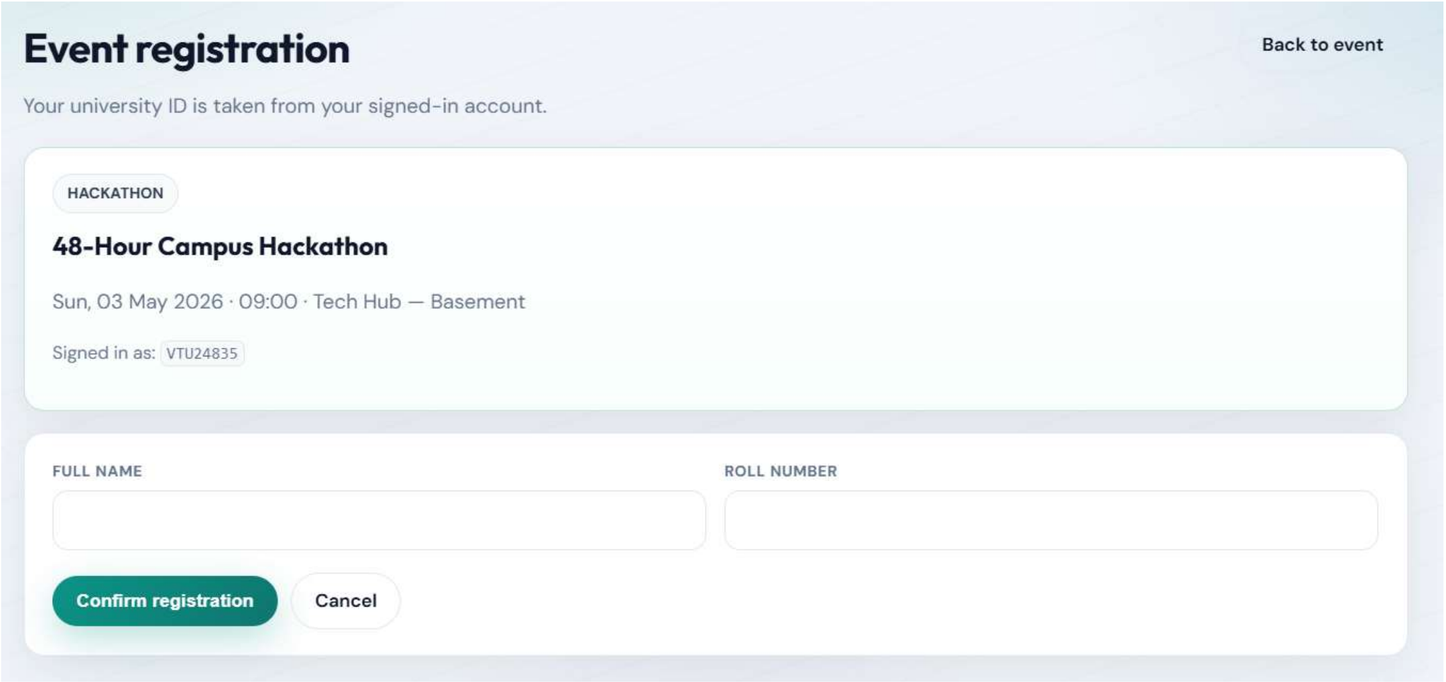
  Displays filtered results dynamically.

IMPLEMENTATION SCREENSHOTS

1
2
3
4
5
6
7
8
9

- The User Login module authenticates registered users using their university ID and password.
- The system verifies the credentials from the database and grants access to the dashboard upon successful login.
- If the credentials are incorrect, an error message is displayed to ensure secure access control.

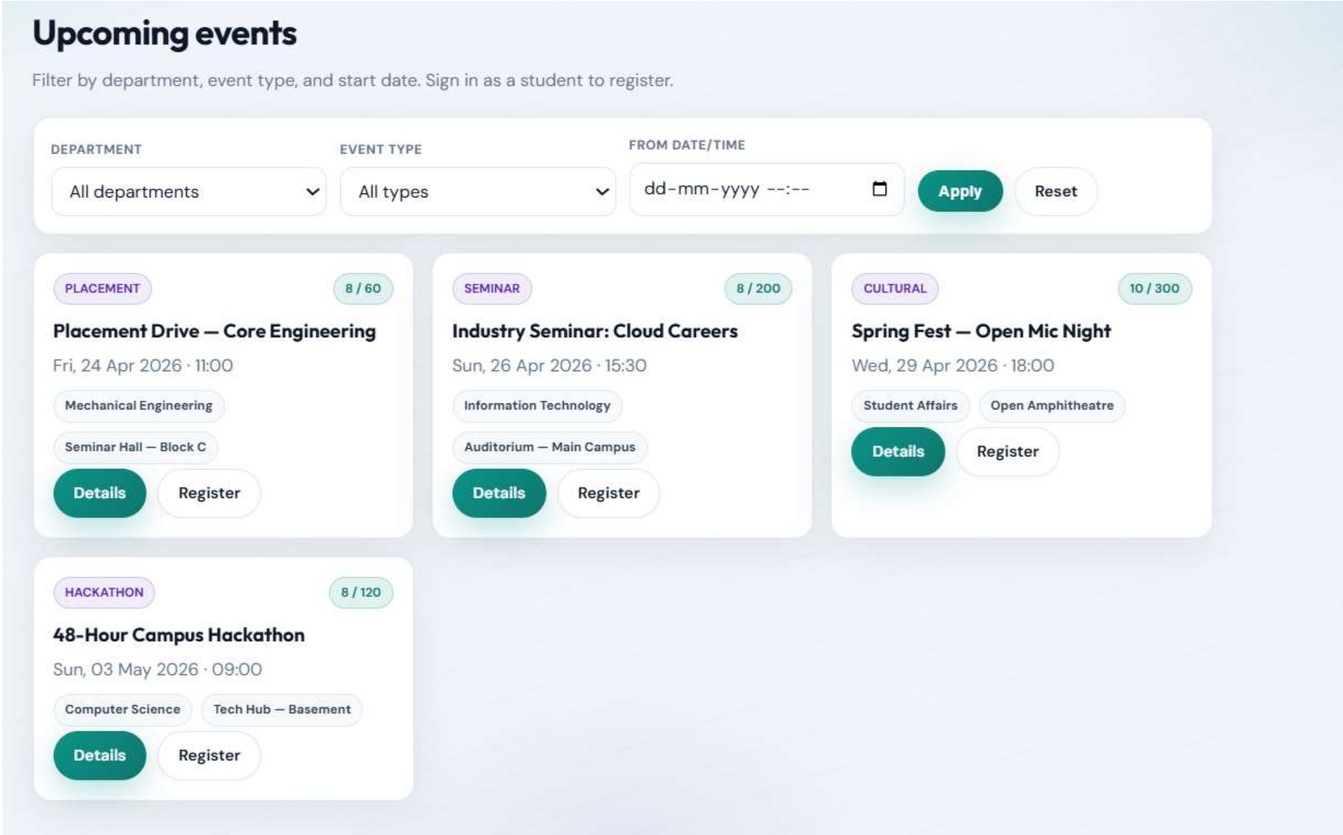




IMPLEMENTATION SCREENSHOTS

1
2
3
4
5
6
7
8(A)
9

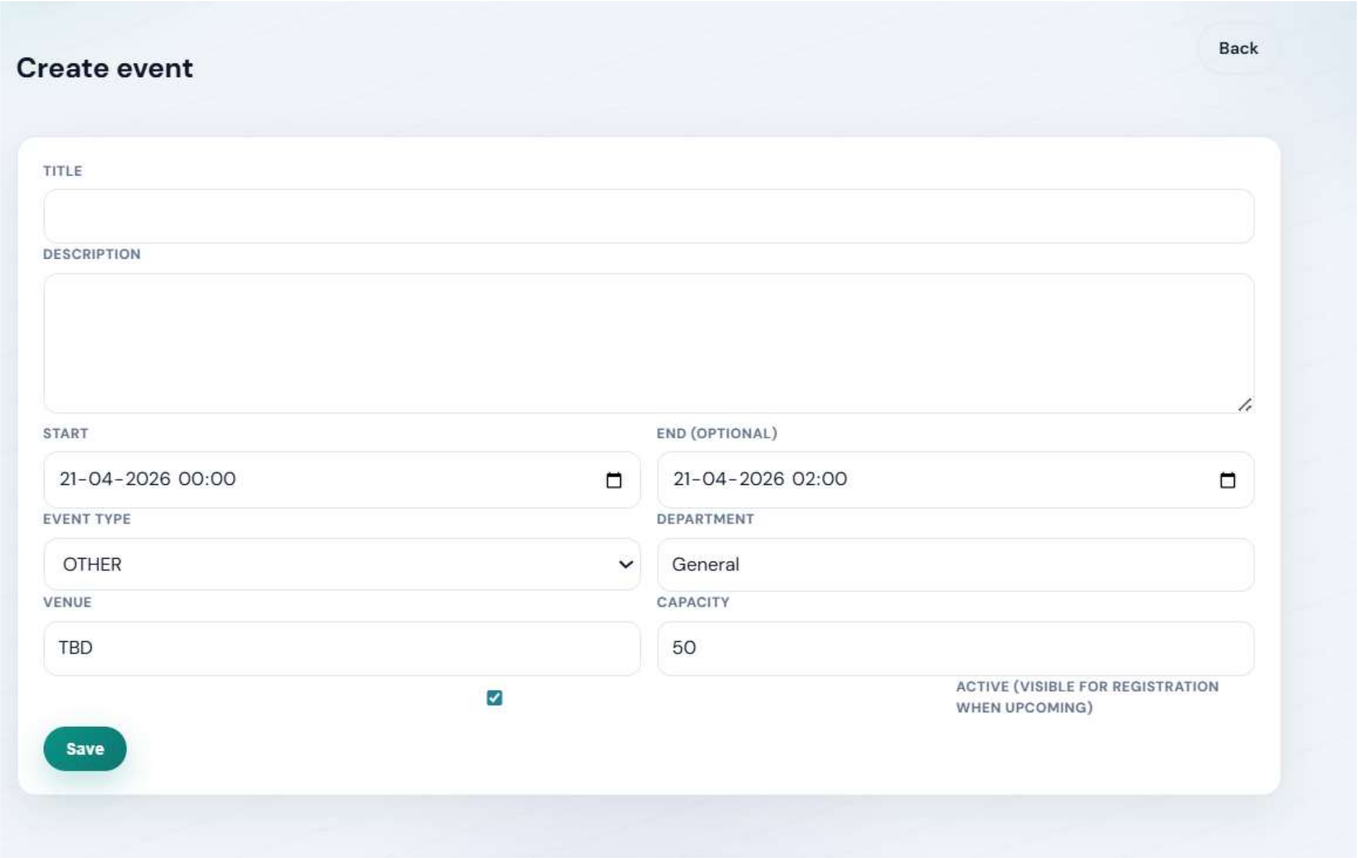
- Shows a list of upcoming events with complete details such as ID, title, description, department, type, and date.
- Provides a search bar to filter events based on department (e.g., CSE, IT) for quick access.
- Allows admin actions like Edit and Delete, and student actions like Register for Event and Give Feedback after the event.



IMPLEMENTATION SCREENSHOTS

1
2
3
4
5
6
7
8(B)
9

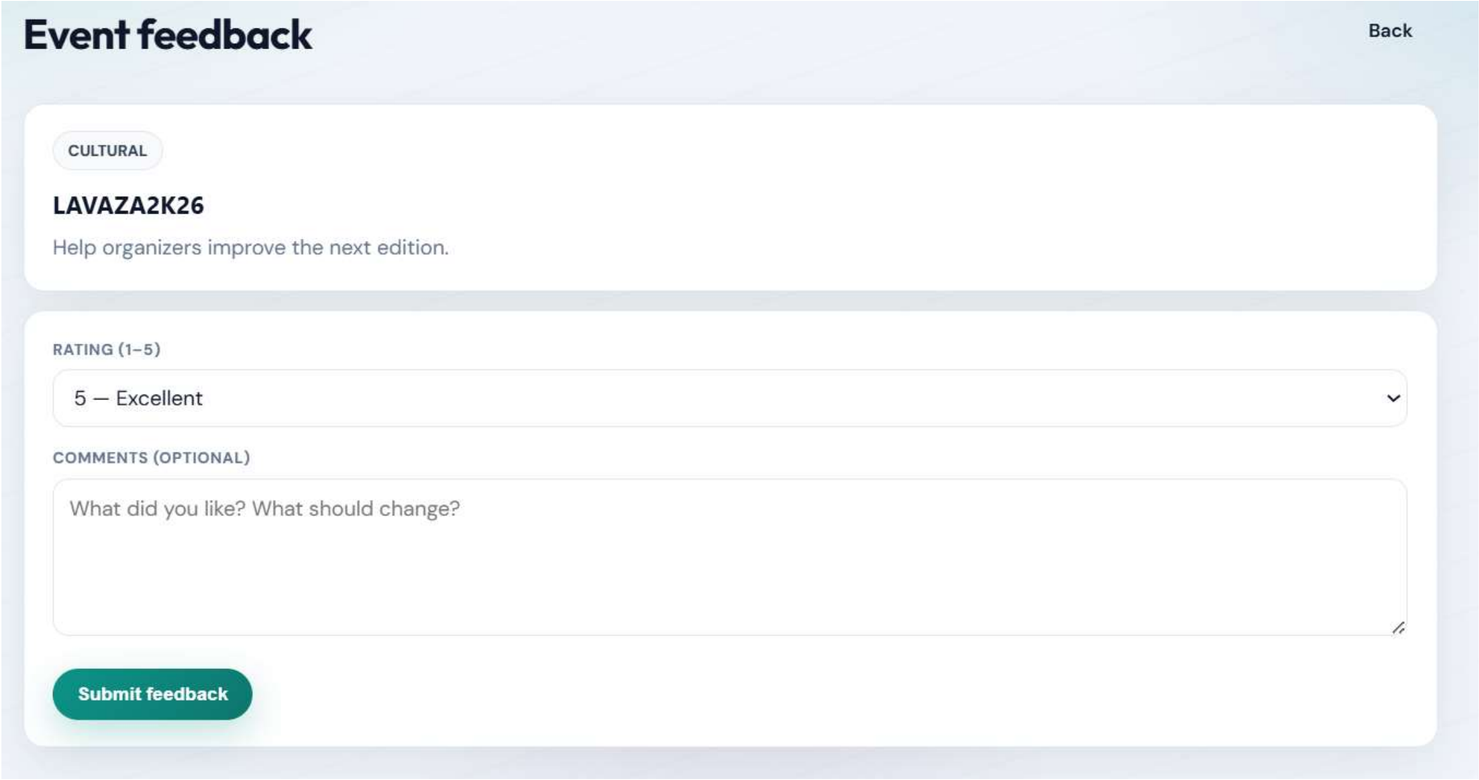
- Allows admin to modify existing event details such as title, description, department, type, and date.
- Pre-filled form fields display current event information for easy editing and updates.
- Provides a single action button to submit and save the updated event details.



IMPLEMENTATION SCREENSHOTS

1
2
3
4
5
6
7
8(C)
9

- Allows students to submit feedback for a specific event by entering their name and event ID.
- Provides a text area for users to write detailed feedback about their experience.
- Includes a submission button to send and store feedback in the system.



ADVANTAGES & LIMITATIONS

1
2
3
4
5
6
7
8
9

Advantages:

- Simple and user-friendly interface.
- Complete CRUD functionality for event management.
- Secure admin access using basic authentication.
- Centralized database for storing events and registrations.
- Easy event search using filters (date, department, type).

Limitations:

- Basic UI design without advanced styling or responsive layout.
- No email or notification system for event updates.
- Limited authentication (only basic admin login, no role-based access).
- Depends on local server and database configuration.
- No mobile application support.
